Words are London, watch, fast, ride, bus, rain, Palestinians, actors, americans. We are going to take a closer look into each one.

1) London: For the first word, we are seeing that this is actually not bad at all, except some seemly irrelevant words like "2000" other words can be similar.

2) Watch: For this word, we are not seeing relevant words for top5 maybe and in following we can see words like handle or save that can be somehow similar.

3) Fast: Except quickly and maybe smart, there are no other words that can be really similar to that.

4) Ride: We can see several words that are similar to the word and other words can be imagined that can be used in the same structure in terms of sentence position like the ride(but they are not really similar to "ride".

5) Bus: Frist two words can be similar, but other words cannot describe this word in any terms.

6) Rain: Water, Sky and land are similar to the word, but something strange about it is that we could see words like storm or thunder or maybe other words but we are seeing the words Palestinians?! And also Iraqis which is somehow strange, is this getting philosophical? ☺ Let's do more and go further with this word.

7) Palestinians: Well the most similar word is actors which is kind of strange, insurgent and facts are words that can be interesting that they appeared here. Let's go for the first word of that which is actors.

8) Actors: Not surprising Palestinians for this too, dancers and writes make sense and we can see Americans here. That's pretty interesting. Let's do Americans.

9) Americans: Iraqis!! It seems computers are thinking maybe these things are somehow related or similar to each other which is interesting. Democrats, fans and players are the words that kind of making sense but not much other words cannot describe Americans.
